

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Original) A door hook to be extended over a door top to both sides of a door, the door hook comprising:

a U-shaped bracket having:

a top member,

a front side which is attached to one edge of the top member, and

a back side which is attached to an other edge of the top member opposite the one edge, wherein the front and back sides are separated by a first distance;

a first hook member attached to the front side;

a second hook member attached to the back side; and

a hinge element provided in the back side such that the second hook member is pivotable in a direction toward the front side from a first position to a second position, wherein with the second hook member in the second position the second hook member and the front side are separated by a second distance less than the first distance.

2. (Original) The door hook of claim 1, wherein the first and second positions of the second hook member are 180-degrees apart.

3. (Original) The door hook of claim 1, wherein at least one of the front and back sides are attached to the top member at an acute angle relative to the top member.

4. (Original) The door hook of claim 1, further comprising a third hook member attached to the back side and positioned between the other edge of the top member and the hinge element.

5. (Original) The door hook of claim 1, further comprising third and fourth hook members attached to the back side and positioned on opposite sides of the second hook member, wherein the third and fourth hook members are non-pivotable.

6. (Original) The door hook of claim 1, wherein the U-shaped bracket is made of one of styrene, polycarbonate and polypropylene.

7. (Original) The door hook of claim 1, wherein the top member is approximately 0.050 to 0.080 inches thick.

8. (Original) The door hook of claim 1 wherein the hinge element is a living hinge.

9. (Original) The door hook of claim 1 comprising at least one of a locking member and an adhesive on the back side which is positioned to retain the second hook member in the second position.

10. (Original) A door hook to be extended over a door top to both sides of a door comprising:

a U-shaped bracket having:

a top member,
a front side which is attached to one edge of the top member, and
a back side which is attached to an other edge of the top member opposite the one edge, wherein the front and back sides are separated by a first distance;
a first hook member attached to the front side;
a spacing member attached to the back side; and
a hinge element provided in the back side such that the spacing member is pivotable in a direction toward the front side from a first position to a second position, wherein with the spacing member in the second position the spacing member and the front side are separated by a second distance less than the first distance.

11. (Original) The door hook of claim 10, further comprising a second hook member attached to the back side and positioned between the other edge of the top member and the hinge element.

12. (Original) The door hook of claim 10, wherein the first and second positions of the spacing member are 180-degrees apart.

13. (Original) The door hook of claim 10, wherein at least one of the front and back sides are attached to the top member at an acute angle relative to the top member.

14. (Original) The door hook of claim 10, wherein the U-shaped bracket is made of one of styrene, polycarbonate and polypropylene.

15. (Original) The door hook of claim 10, wherein the top member is approximately 0.050 to 0.080 inches thick.

16. (Original) The door hook of claim 10, further comprising second and third hook members attached to the back side and positioned on opposite sides of the spacing member, wherein the second and third hook members are non-pivotable.

17. (Original) The door hook of claim 10, further comprising a second hook member attached to the back side, wherein the second hook member is non-pivotable, and wherein the spacing member includes first and second spacing members attached to the back side and positioned on opposite sides of the second hook member, each of the first and second spacing members being independently pivotable between the first and second positions.

18. (Original) A door hook to be extended over a door top to both sides of a door comprising:

a U-shaped bracket having:

a top member,

a front side which is attached to one edge of the top member, and

a back side which is attached to an other edge of the top member opposite the one edge, wherein the front and back sides are separated by a first distance;

first, second and third hook members attached to the back side and positioned in side-by-side relationship with the first and third hook members positioned on opposite sides of the second hook member; and

a hinge element provided in the back side such that at least one of the first, second and third hook members are pivotable in a direction toward the front side from a first position to a second position.

19. (Original) The door hook of claim 18, further comprising a fourth hook member attached to the front side.

20. (Original) The door hook of claim 18, further comprising a fourth hook member attached to the back side and positioned between the other edge of the top member and the hinge element.

21. (Original) The door hook of claim 18, wherein the first and second positions are 180-degrees apart.

22. (Original) The door hook of claim 18, wherein at least one of the front and back sides are attached to the top member at an acute angle relative to the top member.

23. (Original) A door hook to be extended over a door top to both sides of a door comprising:

a U-shaped bracket having:

a top member,

a front side which is attached to one edge of the top member, and

a back side which is attached to an other edge of the top member opposite the one edge, wherein the front and back sides are separated by a first distance;

first, second and third hook members attached to the back side and positioned in side-by-side relationship with the first and third hook members positioned on opposite sides of the second hook member, each of the first, second and third hook members including a first vertical leg portion, a curved portion and a second vertical leg portion extending from the curved portion forming a J-hook structure, wherein the first and second vertical leg portions of the first and third hook members are separated by a second distance and the first and second vertical leg portions of the second hook member are separated by a third distance; and

a hinge element associated with each of the first, second and third hook members such that the first, second and third hook members are independently pivotable in a direction toward the front side from a first position substantially 180-degrees to a second position, wherein with the first and third hook members pivoted to the second position the front side and the first and third hook members are separated by a fourth distance equal to the first minus second distances, and wherein with the second hook member pivoted to the second position the front side and the second hook member are separated by a fifth distance equal to the first minus third distances.

24. (Original) The door hook of claim 23, wherein the first, second and third hook members are formed as a hooking element separate from the U-shaped bracket, wherein the hooking element is attachable to the back side of the U-shaped bracket via cooperating connecting elements formed on the back side and on the hooking element.

25. (Original) A door hook to be extended over a door top to both sides of a door, the door hook comprising:

a U-shaped bracket having:

a top member,

a front side which is attached to one edge of the top member, and

a back side which is attached to an other edge of the top member opposite the one edge, wherein the front and back sides are separated by a first distance;

a first hook member attached to the front side;

a wing extending from one of the top member and the back side, the wing being adjacent the other edge of the top member to which the back side is attached; and

a hinge element provided between the wing and one of the top member and the back side such that the wing is pivotable to a spacing position in which the wing extends under the top member.

26. (Original) The door hook of claim 25 wherein the wing is comprised of a plurality of sections attached to the top member and positioned in side-by-side relationship such that each section is independently pivotable.

27. (Original) The door hook of claim 25 also comprising a projection attached to the wing, the projection sized and positioned to be received in a recess provided in the back side of the U-shaped bracket.

28. (Original) A door hook to be extended over a door top to both sides of a door comprising:

- a U-shaped bracket having:
 - a top member,
 - a front side which is attached to one edge of the top member, and
 - a back side which is attached to an other edge of the top member opposite the one edge, wherein the front and back sides are separated by a first distance;
- a first hook member attached to the front side;
- a second hook member attached to the back side, the second hook and back side being configured so that the second hook can be removed from and reattached to the back side at a second position, such that when the second hook member is in the second position, the second hook member and the front side are separated by a second distance less than the first distance, and
- locking means attached to at least one of the second hook and the back side for reattaching the second hook to the back side at the second position.

29. (Original) The door hook of claim 28 wherein the locking means is double sided tape.

30. (Original) The door hook of claim 28 wherein the back side contains at least one of a hinge and a score line along which the J-hook can be removed from the back side.

31. (New) A door hook to be extended over a door top to both sides of a door, the door hook comprising:

a U-shaped bracket having:

a top member,

a front side which is attached to one edge of the top member, and

a back side which is attached to an other edge of the top member opposite the one edge, wherein the front and back sides are separated by a first distance;

a first hook member attached to the front side; and

a hinge element provided in the top member such that a portion of the top member is pivotable to a spacing position in which the portion of the top member extends under the top member.

32. (New) The door hook of claim 31 wherein the portion of the top member is comprised of a plurality of sections in side-by-side relationship such that each section is independently pivotable.

33. (New) The door hook of claim 31 also comprising a projection attached to the portion of the top member, the projection sized and positioned to be received in a recess provided in the back side of the U-shaped bracket.
